

Title

Catchy interesting title

Summary

Write a structured summary of 100-150 words including, the need for this review, type of studies included, conclusions and implications of key findings
More of recent dated studies to be incorporated

Introduction

Give a rationale for the review in context of what is already known. Provide an explicit statement of questions being addressed with reference.

Methods

Start by addressing the questions you want to discuss:

Step	Processes
Formulation of researchable questions	Select answerable questions
Disclosure of studies	Databases, and key words
Evaluation of its quality	Quality criteria during selection of studies
Synthesis	Methods interpretation, and synthesis of outcomes

The level of evidence should be surfed in descending order:

- Randomized controlled trials- systematic review of Level I RCTs and Level I studies.
- Lesser quality RCT; prospective comparative study; retrospective study; untreated controls from an RCT; inconclusive trials
- Case control study (therapeutic and prognostic studies); retrospective comparative study
- Case series; case control study (diagnostic studies)
- Expert opinion.

Formulating a solution
